## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of claims 1-8, 10, 14-15, 17-18, 25-30, 37-39, and 42-43 in Paper No. 02-24-2004 is acknowledged. Also, Examiner acknowledges that Applicant also cancelled claims 9, 11-13, 16, 19-24, 31-36, 40-41, and 44-51 in Paper No. 02-24-2004.

### ***Election/Restrictions***

*Further restriction* to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, 10, 14-15, 17-18, 25-30, drawn to a body insertable prosthesis, classified in class 606, subclass 1.15.
- II. Claim 37-39 and 42-43, drawn to a process of making a body insertable prosthesis, classified in class 29, subclass 2.15.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the process can be used to make another and materially different product, such as a winding a coil of electrical wire.

The burden is established because although one might expect the searches to overlap, there is no reason for the searches to be coextensive. Because these inventions

Art Unit: 3731

are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species I: stiffness level (choose one of the claimed stiffness levels)

Species II: crossing angle (choose one from one of the claimed crossing angles)

Species III: nominal diameter (choose one from one of the claimed nominal diameters: see claims 17 and 18)

Species IV: radial force level (choose one of the claimed radial force levels)

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Claims 1 and 15 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

Art Unit: 3731

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Fred Niebuhr on April 6, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bradford C Pantuck whose telephone number is (703) 305-8621. The examiner can normally be reached on M-F 8:30-5:00.
